

Cellular Regenerative Medicine Treatment

An Innovative Cellular Treatment from New Life Regenerative Medicine That Offers Advanced Healing Properties.

Regenerative Medicine is designed to introduce a proliferation of healing properties to the site of damaged tissue, helping to speed the body's natural healing process. If you are suffering due to an injury or painful condition and would like to find out if the healing benefits of regenerative medicine may be able to help you find relief, consider **RESToR** from New Life Regenerative Medicine.

RESToR is derived from Wharton's Jelly located on the fetal side of the umbilical cord. RESToR contains cytokines, growth factors, mesenchymal stem cells, collagens, proteins, peptides and numerous other components need to regenerate injured tissue. Mesenchymal stem cells (MSCs) are undifferentiated cells that have the capacity to change into any specific cell type in the body. These cells, once deployed to an area of injury/disease, can readily change into the cell type that is needed to repair. Moreover, MSCs are directed to the body's cell signals that recruit them to the site of an injury. Once they reach this area, they dock and begin repairing by releasing the cytokines, growth factors and other components that are needed in the healing process.

A regenerative medicine treatment utilizing **RESToR** is an ideal choice for individuals who are dealing with any of a variety of injuries or conditions that are interfering with their everyday lives. **RESToR** is especially beneficial for patients over forty who, due to the aging process, have less viable cells than a younger patient would.

RESToR is ideal for wound and pain management, expediting recovery following spinal surgery, and a variety of sports medicine-related conditions, including:

- Knee & ankle tendon & ligament injuries
- Hip and shoulder issues
- Partial rotator cuff tears
- Plantar fasciitis
- Bone spurs
- Tennis and golf elbow
- Muscular tears
- Quadriceps and patella tendon tears
- Meniscus and cartilage tears
- Pinched nerves
- And more

RESToR is administered during a single office visit at one of our partner clinics throughout the U.S. Our medical directors have developed standardized treatment protocols for all of our regenerative products, ensuring that each patient receives the excellent care they deserve.

If you are interested in the healing effects **RESToR** may offer and would like to learn more about any of the regenerative products we offer, Talk to Dr Sheader or Dr Wilson to see if this is right for you.
